Summary

iOS developer, 7 years shipping to the App Store. I've worked in the teams behind a B2B marketplace launched in 20 countries as three branded apps, a Portuguese C2C marketplace that climbed two stars on the App Store, and – for five years now, at Bosch – the apps that control home heating from your phone, where software has to talk to a physical appliance and get it right every time. Swift and SwiftUI daily, MVVM and VIPER where they earn their keep, REST contracts tested before release, not after. On my own time I design, build and ship Periplum, my own iOS app, live on the App Store in four countries – that one solo, from the first commit to the store listing.

Experience

July 2021 - Present

Bosch Thermotechnology | Aveiro

iOS Developer

- Develop and maintain the connected-heating apps for four Bosch brands – HomeCom Easy, MyBuderus, Vulcano Connect and IVT Anywhere – shipped from one shared iOS codebase.
- Work on the app-to-appliance integration – the link customers feel as comfort at home, held to the same scrutiny as anything on screen.
- Adapt a single interface to a whole catalogue of appliance types and generations, for an audience spread across ages, countries and languages.
- Test REST endpoints against product requirements every release, catching contract drift before it reaches customers.
- Tested a Core ML model for anomaly detection on device, reading faults in an appliance from its heating and cooling data.

January 2019 - July 2021

Appsconcept | IPN - Coimbra, Portugal

iOS Developer

- Built a B2B marketplace from scratch, launched in 20 countries as three branded apps – MachineryZone, Agriaffaires and Truckscorner – three business models over one shared codebase.
- All three held above 3.3★ in France, the primary market.
- Maintained CustoJusto, a Portuguese C2C marketplace – clearing the defects its reviews kept naming took the rating up two stars, to 4.5★.

September 2018 - January 2019

Appsconcept | IPN - Coimbra, Portugal

Web Developer

- Worked on a big-data dashboard in React and Angular that generated charts tailored to each client – where I learned how much analytics shapes a product.
- Worked on an on-site preview tool for a construction firm: physical markers let clients see unbuilt foundations and structures through the camera.

Skills

Languages

Swift, Kotlin Multiplatform, JavaScript

iOS

SwiftUI, UIKit, RxSwift, SwiftData, WidgetKit, App Intents, MapKit, PDFKit, StoreKit 2, Core ML, Swift Concurrency, iPhone & iPad

Architecture

MVVM, MVP, MVC, VIPER, SPM, CocoaPods, Carthage

APIs & testing

REST API design, Swagger, Swift Testing, Crashlytics

Release & tooling

GitHub Actions, Jenkins, Travis CI, TestFlight

Product & design

Firebase Analytics, Zeplin, Confluence

Web

React, Angular

Education

Bachelor's Degree in Multimedia

Instituto Superior Miguel Torga
2015 - 2018

Languages

Portuguese – native
English – professional working proficiency

Side Project

Periplum

Solo: design, architecture, code, release and store listing

- iOS app on the App Store (PT, ES, FR, IT).
- SwiftUI and SwiftData on iOS 18, Swift 6 strict concurrency, domain logic isolated in a local Swift package.
- Widgets for Home Screen, Lock Screen and Control Center, plus App Intents for one-tap capture from Shortcuts and Siri.
- StoreKit 2 in-app purchases with entitlement verification.
- 449 automated tests (Swift Testing) run on every push through CI.
- Shipped in 6 locales via String Catalogs; Firebase Auth (Apple, Google), Analytics and Crashlytics.
